SAMSUNG

Introducing the Samsung Chromebook 4

The sleek and compact Samsung Chromebook 4 is a hardworking, hard-wearing device that's designed to help teachers and students work productively. It allows you to move between home and classroom, quickly and seamlessly, securely saving to the cloud as you go.

Together with Google, we're developing industry-leading mobile platforms that will give every user more choice and greater possibilities. And it doesn't end there. Samsung Chromebooks are just part of a whole ecosystem of innovative, compatible technologies that work together to help maximise teaching and learning, for everyone.

All-new solidity design

Samsung Chromebooks are as stylish as they are strong. They're sleek, modern and slimline too, so they're easy to carry around and use anywhere—in school or at home. With their clean and simple design, they're easy for even the youngest of students to use.

Military tested for durability

We know how important it is to protect your investment, so we've made sure Samsung Chromebooks are tough enough to cope with whatever students put them through. They've been tested to military standards (MIL-STD-810)[1], which means they're strong enough to withstand drops, knocks, extreme temperatures and more.[2]

## USB-C port for power, fast charging and video

From fast-charging your battery to downloading work, it's quick and easy with Samsung Chromebooks. Thanks to the USB-C port, they only need one connector. So, that's fewer cables to get in the way—and to keep track of.

Security

Samsung Chromebooks are less vulnerable to attacks as they're covered by multiple layers of protection. So, if any one layer is bypassed, others are still in effect. With this extra protection, you can explore with more confidence.

Long-lasting battery

The Samsung Chromebook comes with a long-lasting battery, so you don't have to worry about charging it lesson after lesson.

1. Mil-STD-810G Tests include: Transit drop, vibration, high temperature, temperature shocks, freezing, dust, humidity, low pressure.
2. Transit Drop test condition results based on Mil-STD-810G 516.6, 122cm/25 times within the original product packaging.
