A new era of business–powered by Galaxy AI. ✨

Today, being the best professional you can be means using the best technology available. Push your devices to their full potential, and they'll unlock yours.

Welcome to a new era of mobile device technology—one in which your phone helps to enhance your performance beyond what you thought possible, so you can make the most of every workday.

With a super-slim bezel, and crafted from enhanced, durable materials, Galaxy S24 Series devices are as strong as they are stunning. And with Samsung's seamless ecosystem, you can easily connect with your other devices to take your multitasking further. Drag and drop files across your phone, laptop and tablet, share files simply, and link to a large monitor for a PC-like experience.

But that's not all. Where the S24 Series really stands out is with the advanced AI experiences[1] that help you to do the best work of your life. Ever needed to communicate in another language? How about having your shared notes automatically curated and actioned? Want to take your content creation skills to the next level, or find answers to big questions just by circling what you're curious about? The S24 Series has you covered—making it feel effortless to do great work.
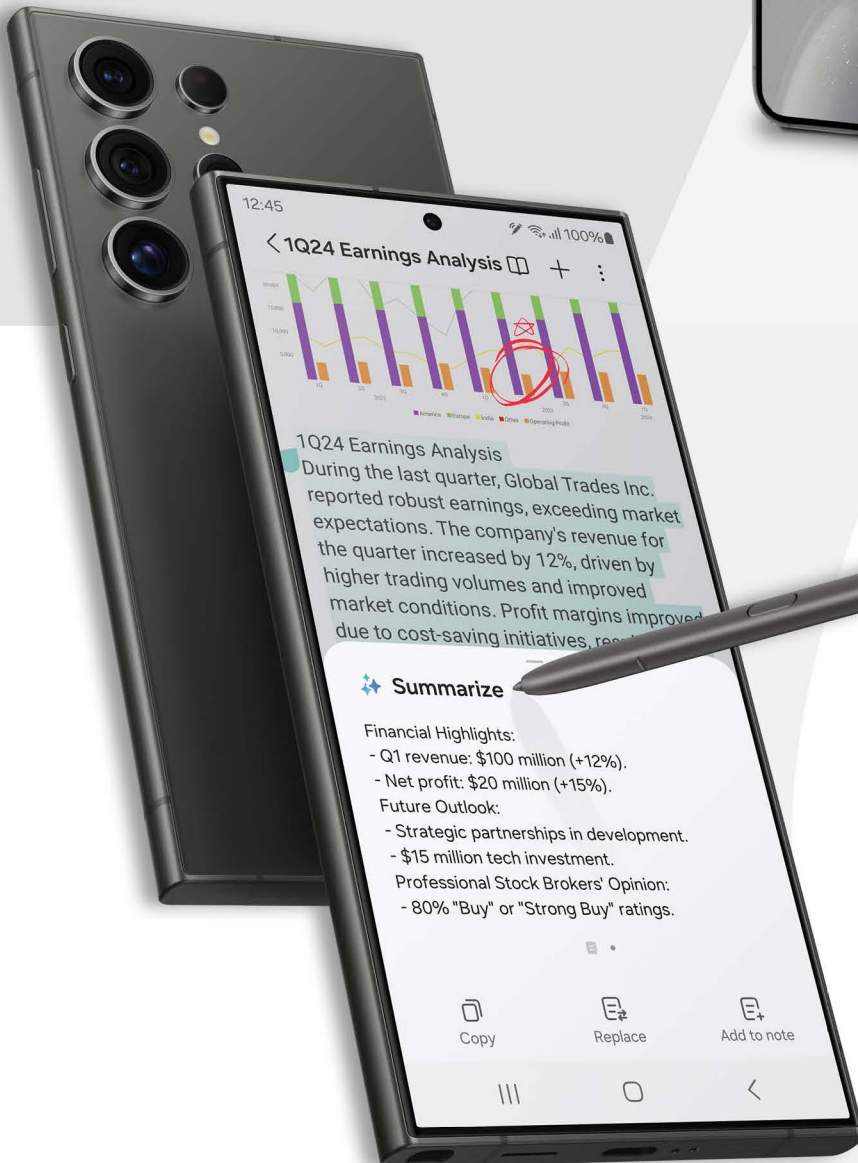

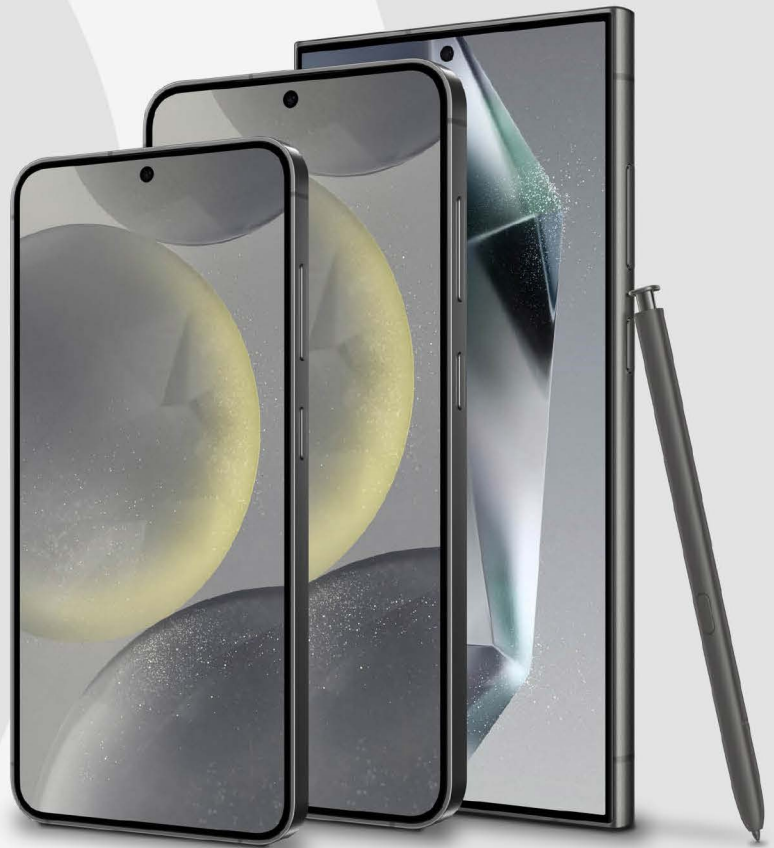

Build connections beyond borders.

Connect with colleagues and customers across languages, cultures and devices, discovering and sharing new big ideas with a little help from Galaxy AI. Just pick up your Galaxy S24 and let Live Translate automatically convert your speech into one of 13 languages.[2] Language barriers holding your business back? Leave them in the past.

You'll also be striking exactly the right tone in your work communications, with Chat Assist providing context-sensitive suggestions for more effective writing, all the way down to which emojis to use.[3]

Business insight at your fingertips.

Here's a phone that works intuitively around you. Get the answers your business needs fast, summarised and enriched by the power of Galaxy AI. The knowledge of the world is now at your fingertips.

Discover more about anything on your phone screen with Circle to Search with Google.[4] Just circle any object or text and, just like that, you'll get instant search results. And for even greater understanding, Browsing Assist can do the hard work of summarising web pages. That means getting to the heart of the story, or the data, faster.

Smart about business security.

Get peace of mind with sleek security that won't interrupt your productivity. Your Galaxy S24 is secured at every level by defence-grade Samsung Knox, biometrics and smart anti-tracking tools.

The Galaxy S24 Ultra allows you to dedicate memory and storage space to private files, keeping your work data isolated and secure. Knox Vault combines security-specific hardware and new, integrated software to shield your most secure data from everything that might try to get in—even the Android OS and its applications. Auto Blocker will also prevent malicious code from entering, either via hardware or software.
