

## Tabletop Kit (EU, 2-Gang)

### VK102

The VK102 is a 2-Gang EU-type tabletop kit that takes the flexibility of ATEN's control system solutions (e.g. VK0200 and VK112EU), touch panel models (e.g. VK320), and Pro AV transmitter lineup (e.g. VE2812AEUT) to the next level. It is also compatible with any 3rd party EU/MK type device. By tilting the device attached to the VK102 at an ergonomic angle, the VK102 helps reduce the force needed when one presses the device's keys or connects cables to the device's ports. With screw holes that ensure secure attachment to the surface, the VK102 supports desk mounting and wall mounting to meet versatile installation needs. The anti-slip rubber at the bottom provides extra grip.

The VK102 comes with ample space that allows for cable routing through either the rear opening or the bottom, making cable management easier while optimizing space usage. Its sleek, elegant design adds aesthetics to the control pads of various color editions (black or white). Built to compliment the control system solutions, the VK102 is suitable for conference rooms, lecture halls, digital podiums / lecterns, and any other applications that require desk / wall mounting installation.
